# New Product Announcement!

February 2007

## *Eclipse*

LightGuard proudly introduces the newest addition to our outdoor lighting family. The Eclipse combines an industry recognized, outdoor wall-mounted light and an integral emergency lamp for a single fixture for normal and egress lighting. One 100-watt, high-pressure sodium lamp or one 100-watt, metal halide lamp, combined with a polished specular aluminum reflector, provides illumination. A 35-watt, instant strike Xenarc lamp, powered through a remote emergency battery unit (LightGuard's LPM or Vectra unit), provides emergency illumination (external emergency power required).

Installation and wiring is made easy with a pre-mountable wall box with integral splice chamber, built-in bubble level, and a polarized, low-voltage, emergency power connector with a 10 foot interconnect. The Eclipse is ETL listed to UL 924 standards, UL 1598 standards, CSA C22.2 No 141-02 standards, and CSA C22.2 No 250.0-04 standards. The Eclipse is wet location listed -40°F (40°C) to 104°F (40°C).

LightGuard is a leading manufacturer of commercial and industrial emergency lighting, exit signs, and AC emergency lighting systems. LightGuard is a Genlyte company, distributes its products worldwide, and is on the web at [www.lightguard.com](http://www.lightguard.com).

Please contact us should you need additional copies of this literature. Thank you for your continued support!

*Remember to keep **LightGuard** in mind for all of your emergency lighting needs!*
