## **LF750-4PT & LF1000-4PT End-of Lamp-Life Compatibility and Cold Weather Options**

LightGuard is pleased to announce an upcoming product enhancement to our LF750 and LF1000 emergency ballast products. Due to a continual increase in AC ballast products that employ end-of-lamp-life detection, LightGuard has upgraded to our LF750-4PT and LF1000-4PT series. Both product series are fully compatible with traditional and end of lamp life detection AC ballast products. The revised models will be seamlessly rolled into production as existing materials are depleted and are expected to be in the marketplace within the next 30 to 60 days.

To further enhance your ability to meet demanding job requirements, we are also including an optional damp location listing as well as a cold weather option with the product. Both of these options are found in the ordering information section of the respective specification sheets.

Please be aware that this change will take place as existing materials are consumed and any orders received as LF750-4P or LF1000-4P will be changed in-house to our new LF750-4PT or LF1000-4PT series respectively.

Thank you for your continued support.
