New Product Announcement!

Fast Transfer Centaurus Linebacker Supports HID

August 25, 2009 –

LightGuard is pleased to announce the addition of fast transfer models to support HID loads to the new Centaurus Linebacker product line. The newest Centaurus Linebacker inverters are available in 300, 400 and 600 watt models.

Controlling local incandescent, electronic ballast, HID, solid state and any other critical loads requiring conditioned emergency power is now made easy in an affordable package. As with any inverter system HID, loads should be sized based on worst case VA load conditions for sizing compatibility.

The base models are supplied with fused outputs while optional output circuit breakers are available (maximum two output circuit breakers). Operational status is monitored and displayed on the front of the unit with a five-LED panel to monitor and indicate:

- AC Power
- Output Voltage
- Output Current
- Emergency Inverter Status
- Output Overload

As always, should you have any questions, please feel free to contact us directly and thank you for your continued support!

*Remember to keep **LightGuard** in mind for all of your emergency lighting needs!*
