Low-Profile Ballast Products Enhanced

July 2010 – In line with technology shifts in T5 and T5HO lamps and ballasts, LightGuard is releasing a completely updated line of low-profile emergency ballasts. With this update, we are also including two new versions of our 2-pin compact lamp compatible products.

The biggest advantage of our newly designed low-profile products include end of lamp life compatibility circuits for seamless installations in the field. Other enhancements consist of damp location ratings and additional listings that include “suitable for use in sealed and gasketed luminaires”, both of which you will find as standard product features. These additional listings will allow for the introduction of this product line in just about every installation need in the market, be it factory or field installed.

The following table represents the replacement models available in this product line:

New Series	Replaces
FTUPL-N	FTUPL
FTUPL26-N	FTUPL26
LTP1300T	LTP1300
LTP500T	LTP450
LTP520T	LTP520

Thank you for your continued support!

*Remember to keep **LightGuard** in mind for all of your emergency lighting needs!*
