## Product Bulletin

### NightWatch Takes a Turn for the Better

**June, 2011** – LightGuard is pleased to introduce the horizontal NightWatch. The horizontal NightWatch is the ideal compliment to the successful original NightWatch product. By rotating the product orientation 90 degrees and eliminating any visible fastening hardware, the horizontal NightWatch will seamlessly blend into interior spaces as well as outdoor brick or masonry work areas.

We are also using this opportunity to introduce a 120 VAC line voltage dimmable driver option as well as all of our in-house powder paint color options to the entire product family. The full range of NightWatch products has also recently been upgraded with newer LED chip sets allowing for more total lumen output of the fixtures. We continue to provide the same reliable attributes you have come to know and love from the NightWatch series:

- ✓ Powder painted cast aluminum with satin acrylic lens
- ✓ Indoor/outdoor wet location listed
- ✓ No visible fastening hardware
- ✓ Low-voltage and line-voltage models
- ✓ User-selectable light level dip switch or line voltage dimmable drivers

We are very excited about the added benefits and product options associated with our new horizontal NightWatch product line and look forward to assisting you with any product or application questions you may have. As always, should you have any questions, please feel free to contact us directly. Thank you for your continued support!

*Remember to keep **LightGuard** in mind for all of your emergency lighting needs!*
